the	 With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language							
3. Wit	or 55.3). With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:							
	contai	ned in the international application in written form.						
	filed t	ogether with the international application in computer readable form.						
	furnis	hed subsequently to this Authority in written form.						
	furnis	hed subsequently to this Authority in computer readable form.						
	The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.							
	The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.							
4.	The a	mendments have resulted in the cancellation of:						
		the description, pages						
		the claims, Nos.						
		the drawings, sheets/fig						
5.		eport has been established as if (some of) the amendments had not been made, so the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**	since they have been considered to go					
in .	placemen this repo 170.17).	t sheets which have been furnished to the receiving Office in response to an invitor as "originally filed" and are not annexed to this report since they do n	tation under Article 14 are referred to not contain amendments (Rule 70.16					
** Any	y replace	ment sheet containing such amendments must be referred to under item 1 and ann	exed to this report.					

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/CH 03/00444

V.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
	citations and explanations supporting such statement

1.	Statement			
	Novelty (N)	Claims	1-3	YES
		Claims		NO NO
	Inventive step (IS)	Claims		YES
		Claims	1-3	NO
	Industrial applicability (IA)	Claims	1-3	YES
		Claims		NO

2. Citations and explanations

Reference is made to the following documents:

D1: DE 196 11 883 A (BAUKU TROISDORFER BAU UND KUNS)
2 October 1997 (1997-10-02);

D2: US 5 462 314 A (YUICHIRO GOTO ET AL)
31 October 1995 (1995-10-31).

Document D2 was not cited in the international search report.

The present application does not fulfil the requirements set forth in PCT Article 33(1) because the subject matter of claim 1 does not involve an inventive step as defined in PCT Article 33(3).

Document D1, which is considered to be the prior art closest to the subject matter of claim 1, describes (the references between parentheses apply to said document) an assembly for connecting two non-heat expandable thermoplastic tubular elements (1, 2), including a first non-heat expandable tubular element (1) having an attachment area (see figure 2) on the inside wall of one of the ends thereof, and a second non-heat expandable

tubular element (2) having an attachment area (see figure 2) on the outside wall of one of the ends thereof, wherein the diameter of the inside wall of the end of said first tubular element (1) is greater than the diameter of the outside wall of the end of said second tubular element (2) in such a way as to define a ring-shaped gap between said inside and outside walls when said two ends overlap, which assembly further comprises a thermoplastic sleeve (7) suitable for being housed in said ring-shaped gap.

It follows that the subject matter of claim 1 differs from the known assembly in that the sleeve contains a ringshaped inductive element.

The problem that the present invention is intended to solve can therefore be considered to be that of providing a heating system, which is simplified in comparison with a resistive heating system (see D1, column 1, lines 56-66).

The solution proposed in claim 1 of the present application is not considered to be inventive (PCT Article 33(3)), for the following reasons:

- The solution proposed in claim 1 of the application is advantageous in that it does not require a cabled connection, thereby simplifying the heating system required for fusing the two tubular elements;
- According to the description in document D2 (see document D2, column 2, lines 28-33), the ring-shaped inductive element (see D2, column 5, lines 5-9) offers the same advantages as those mentioned in the present application. As a result, it would be a routine measure for a person skilled in the art seeking to

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/CH 03/00444

solve the stated problem to include this feature in the assembly for connecting two tubular elements described in document D1.

Dependent claim 2 does not contain any features which, in combination with the features of claim 1, might define subject matter that fulfils the PCT requirement of novelty because document D1 describes an assembly in which the first tubular element is a coupling (see claim 1 and figures 2 and 3). The subject matter of claim 2 of the present application is not considered to be inventive (PCT Article 33(3)).

The steps of the method for fusing two tubular elements as per independent claim 3 are also described in document D1 (see claims 1 and 5). The same argument as the one set out above with respect to claim 1 applies mutatis mutandis to the subject matter of independent claim 3 of the present application. As a result, claim 3 is not considered to be inventive either (PCT Article 33(3)).
